

BA, BB, BC

Operation:

The flow limiters work on a pure mechanical base and do not require any external power source.

The cross sectional area, available to the flowing medium, will change with pressure changes in that way, that an almost constant flow stream can be maintained.

Application

The flow limiters model BA, BB and BC are used to maintain a constant or restrict a flow stream of liquids.

The flow limiters are employed, besides other applications, in the following areas:

- Water treatment
- Irrigation
- Sanitary installations

Features

The flow limiters work in the control pressure range of 2 to 10 bar.

Further features of these sturdy units are:

- any mounting position
- high functional reliability
- suitable for hotwater
- Thread connections

Installation hints

The installation of the limiters can be done in any way in the system. The flow direction must be observed.

The limiters must not be used as supporting part in a pipe structure.

The liquid must not contain any solid particles!

We recommend the installation of strainers, model SFD or SFM.
